## ABOUT ME

Dedicated and results-driven aspiring Data Scientist and Machine Learning Developer with hands-on experience in Python, data analysis, machine learning model development, and API integration. Currently interning at Geek Theory Company where I'm building ML solutions with real-world datasets. Seeking an entry-level Python ML/DS Engineer role where I can leverage my technical skills, contribute to data-driven solutions, and grow in a collaborative environment.

## EDUCATION

### B.Tech in Computer Science (Pursuing)

Shri Guru Sandipani Institute of Technology and Science, Ujjain

Completed 2026

CGPA: 6.27

### Higher Secondary (12th)

Boys school unhel, Ujjain — MP Board

Score: 70%

## EXPERIENCE

### Machine Learning Intern

3 Months (Ongoing)

Current Internship

Geek Theory Company

- Developing and optimizing machine learning models using diverse data sources (APIs, databases, web data).
- Performing data preprocessing, feature engineering, and model training using Pandas, NumPy, and Scikit-learn.
- Achieved significant accuracy improvements in predictive models through iterative optimization and hyperparameter tuning.
- Implementing data scraping solutions to collect and process multi-source datasets.
- Collaborating with team members on end-to-end ML pipeline development.

## PERSONAL PROJECTS

### Student Result Predictor

Machine Learning | Python, Pandas, NumPy, Scikit-learn, Matplotlib

- Built a supervised learning model using Linear Regression to predict student academic performance.
- Processed multi-record student dataset with comprehensive data cleaning and preprocessing.
- Implemented model evaluation using Confusion Matrix and multiple performance metrics (Accuracy, Precision, Recall).
- Achieved 95% accuracy on test dataset demonstrating strong predictive capability.

### Nominee Vault

Full Stack | Node.js, Express, MySQL, HTML/CSS/JS, REST APIs

- Developed a secure digital legacy vault application where users can store passwords, documents, and personal notes with end-to-end encryption.
- Implemented a Dead Man's Switch system that automatically forwards encrypted vault data to nominated contacts upon user inactivity.
- Built JWT-based authentication with bcrypt password hashing and MySQL database integration for secure user management.
- Designed a fully responsive UI with split-screen login, password strength meter, and role-based nominee management system.

### ATM Simulation System

Python, CSV, Object-Oriented Programming

- Developed a console-based ATM application with features like balance check, deposit, and withdrawal.
- Implemented data persistence using CSV files for account management.
- Demonstrated understanding of core programming concepts and basic software architecture.

## TECHNICAL SKILLS AND INTERESTS

**Programming Languages:** Python

**ML & Data Science Libraries:** Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn

**Machine Learning:** Linear Regression, Supervised Learning, Model Evaluation, Confusion Matrix, Hyperparameter Tuning, Data Preprocessing, Feature Engineering

**Web Frameworks & APIs:** FastAPI, REST APIs

**Web Technologies:** HTML, CSS

**Databases:** MySQL, SQLite

**Data Skills:** Data Analysis, Data Visualization, Data Scraping, Exploratory Data Analysis (EDA)

**Version Control:** Git, GitHub

**Core Concepts:** Data Structures & Algorithms, Object-Oriented Programming, Problem Solving
